

Substitution · Pricing · Recommendation

JAS + H2 2026 roadmap — problem sizing, evidence, before/after, prioritisation and the delivery plan

Foundations underneath: widget instrumentation · pricing rule engine · live inventory (IMS) · experimentation & guardrails

Grow margin and conversion with precision — not by discounting more

42.3% / 27.4%

substitute vs blended gross margin
GM/order ₹499 vs ₹338 · Jun '26

38.6%

of orders are CM1-negative — ₹1.94 Cr CM
lost / month
May '26 order-level CM1

52%

of carts sit below the free-delivery MOV —
convert 48% vs 73% above
cart→order, Jun '26

+3–3.5% · +₹10–12

H2 ambition: orders/day and GM/order, net
de-duplicated
gross initiative sum +5% OPD · +₹16 GM/order

The thesis

Three engines, zero new traffic needed — substitution makes the margin, pricing controls it, recommendation builds the basket. Every win compounds on demand we already own.

The levers are proven — shipped fixes this half already added +1.6pp subs added rate, +₹8 AOV and +2.1% orders/day.

JAS lands the P0 bets on shared foundations; OND compounds with personalisation and optimization — measured initiative by initiative.

Four asks

- 1 Sign off JAS sequencing — the P0 cut-line across the three engines
- 2 Pricing policy: substitute price agnostic of the original medicine — one consistent price across the app
- 3 Unblock dependencies — Mumbai warehouse, procurement / supply on OOS, protected data-eng bandwidth
- 4 Endorse the north stars — GM/order + orders/day, held by guardrails

Shipped wins already move the metric

Measured lifts from launches this half — the coverage & parity levers work before we scale them.

Substitute Parity

+1.6pp

subs added rate

+0.86pp

Home → Order conversion

-50%

subs-algo latency

Branded OOS · Coverage

+₹8

AOV

+₹3

GM per order

+9.6%

Search → Item Added (OG OOS)

Generic OOS

+2.1%

orders per day (OPD)

+3.5%

substitute order share

Takeaway: these are shipped, measured lifts — coverage & parity already move conversion, AOV and margin. H2 productises and scales them: algo coverage, value-based ranking, MOV builder.

Half the catalogue shows no substitute — and the ones shown aren't ranked

Substitutes earn 42.3% GM vs 27.4% blended. Two levers: better coverage, better switch rate.

WHY IT MATTERS · TODAY

42.3% / 27.4%

GM on substitute orders vs blended

~60%

skip the substitute — trust, not price, is the barrier

WHAT THIS ROADMAP MOVES

53 → 75%

substitute SKU coverage

31.6 → 35%

substitute order penetration (+3.5pp bet)

Lever	Initiative	Priority	Estimated impact
Coverage	Phase 1 — exclusion-flag fallback	P0	GM +₹4.0/order · +1% OPD
Coverage	Phase 2 — remove is_consider → algorithmic selection	P0	
CTR	Trust & visibility — PDP + bottom-sheet (design: slide 9)	P0	+2pp subs → GM +₹3/order
CTR	Ranking — best expected value = switch × margin	P0	+₹2/order · +0.5% OPD
Coverage	OOS original handling (fair saving) · portal-flow coverage	P1	~8% of OOS impressions lack an alternate

Trust deficit: 65.9% of substitutable units go unswitched today — the single biggest conversion pool we own. Sizing detail: companion workbook.

38.6% of orders lose money while the discount is flat for everyone

Reallocate discount from margin-losing to margin-making customers — grow conversion sustainably.

WHY IT MATTERS · TODAY

38.6%

of orders are CM1-negative — ₹1.94 Cr GM lost / month

85%

of orders already run with no coupon

WHAT THIS ROADMAP MOVES

+1%

orders/day from elasticity + optimization

+₹5.0

GM/order from price optimization

Initiative	Priority	Estimated impact
Pricing Rule Engine — experiments across products, users, cities, warehouses	P0	enabler — gates every experiment
Universal Pricing Framework — substitute priced off its own MRP, same everywhere	P0	simplify + trust · sim: neutral GM/order
Price Elasticity Experiments — points that maximise conversion × margin	P0	+1% OPD · +₹5.0 GM/order
Global Price Optimization — objectives + competitive position, full catalogue	P0 · OND	rides engine + elasticity

Decision we need: substitute price agnostic of the original medicine — one consistent price across widget, search, PDP and cart.

Half of carts sit below free delivery — and convert 25pp worse

Over half of carts sit below free delivery and convert far worse — MOV Builder moves them across.

WHY IT MATTERS · TODAY

52%

of carts sit below the free-delivery line

48 → 73%

cart→order conversion — below vs above MOV

WHAT THIS ROADMAP MOVES

+1.5%

orders/day (MOV + PDP/Search reco)

+₹3.9

AOV from MOV Builder

Initiative	Priority	Estimated impact
MOV Builder — multi-tab cart widget (Buy Again · Browsed · Quick Grab · Contextual) + free-delivery nudge	P0	+1% OPD · +₹3.9 AOV
Post-ATC cross-sell — contextual, non-disruptive (PDP + SRP)	P0	+0.5% OPD
Widget instrumentation — end-to-end, gates measurement	P0	enabler
Similar Product on PDP · Customer Also Bought upgrade	P1	incl. PDP reco

41.5% of orders still ship from below-MOV carts, paying delivery fees — the last ₹100–200 to the line is the cheapest conversion we can buy.

Who leads each surface — and where Truemeds lags

Surface	Truemeds	Tata 1mg	PharmEasy	PlatinumRx
Substitution	Leads	Strong	Strong	Leads
Home feed · Buy Again	Leads	Leads	Strong	Limited
PDP cross-sell & discovery	Limited	Leads	Leads	Limited
Cart & checkout	GAP	Leads	Leads	Strong

Leads
Strong
Limited
Gap

What it says at a glance

Tata 1mg leads Home, PDP and Cart. Truemeds leads substitution and is strong on home — but Limited on PDP and a clear Gap in the cart.

Biggest gaps to close

1. Cart — recos appear only after checkout
2. PDP — one shelf vs 1mg's four, and no salt search

Build on strength

Home reorder is strong → add a 'for you' feed + own 'discreet reorder'.

Truemeds leads substitution and is strong on home — but trails on PDP, and has a clear gap in the cart.

The substitute becomes trusted, available and fairly priced

TODAY

Substitute hidden behind a flag; anchored price

Dolo 650 Tablet 15
Micro Labs Ltd

MRP ₹32.12 — **₹25.70** · ₹2.14/unit
flat 26% off — same for everyone

ADD

SUBSTITUTE

Welset 650 Tablet 10
shown only if is_consider allows

MRP ₹20.29 — **₹10.71**
“50% below” — vs the already-discounted OG

ADD

- Half the catalogue shows nothing — the flag decides, not a ranker
- Anchor price shifts with the OG's discount; widget ≠ search price
- No trust framing · no ETA · OOS original is a dead end

→

AFTER · JAS + OND

OG + substitute together — verified, priced off MRP

The substitute experience, rebuilt for trust

Why you can trust this switch

- **Exactly the same salt** — Paracetamol / acetaminophen 650 Mg — composition shown side by side, not buried
- **Checked by Truemedics pharmacists** — verified before it is ever suggested; 'Request Call' for the unsure
- **Made by a maker they know** — Ranbaxy — 60+ years, WHO-GMP certified, also makes Volini & Revital
- **Honest anchor** — save 50% per unit off the substitute's own MRP — not off an inflated OG price

The bet this design carries: +2pp substitute penetration $\approx$ +₹4.7 GM/order (charter, slide 4).

Impact × Effort across the three engines — P0 first

P0 — commit now (JAS)

Coverage Phase 1 & 2 · EV Ranking · Trust & visibility · Universal Pricing · Pricing Rule Engine · Elasticity experiments · MOV Builder · Post-ATC cross-sell · Widget instrumentation

P1 — next (JAS → OND)

Portal-flow coverage · OOS fair-saving handling · Similar Products on PDP · Customer-Also-Bought upgrade

P2 — later (OND+)

Global price optimization · cohort / tiered pricing V2 · ML reco engine · condition-led cross-sell · personalisation

JAS ships the P0 levers; OND compounds them

🚩 Coverage Ph 1 & 2 gated on Mumbai warehouse · Elasticity needs Rule Engine + Universal Pricing live first · dashed = OND, directional — committed after JAS reads.

GM/order walks ₹338 → ~₹347; orders/day +3.5% net

GM / order — Jun '26 baseline to Dec '26 plan

Orders / day and supporting metrics

Orders / day

~21K → +3–3.5% net

gross +5%: coverage 1 · ranking 0.5 · MOV 1 · reco 0.5 · elasticity 2

Subs order penetration

31.6% → ~35%

+2pp trust · +1.5pp coverage & ranking

AOV

₹1,232 → +₹3.9

MOV Builder at 4% widget CVR

Home → order conversion

+0.86pp shipped · more to come

parity fix already moved it; full baseline lands with instrumentation (Jul)

Estimates overlap on the same orders — gross sum (+5% OPD · +₹16 GM/order) is not additive; 30% overlap haircut is a stated planning assumption, replaced by measured A/B lifts as they land.

Four decisions today

1

Sign off JAS sequencing

P0 first: coverage 1 & 2, EV ranking, trust UX, universal pricing, rule engine, elasticity, MOV builder, instrumentation — JAS delivery, OND compounding.

2

Decide the substitute pricing policy

Substitute price agnostic of the original medicine — a standard % off MRP — and one consistent substitute price across widget, search, PDP and cart.

3

Unblock the dependencies

Lucknow warehouse gates Coverage Ph 1 & 2; procurement / supply on OOS & assortment depth; protected data-eng bandwidth for instrumentation, rule engine and IMS.

4

Endorse the north stars

GM/order + orders/day as the pod's H2 scorecard — held by guardrails: clinical safety, margin floor, price consistency, auto-rollback.

The commitment: GM/order ₹338 → ~₹347 and orders/day +3–3.5% by December — measured initiative by initiative on live dashboards, guardrails enforced.

Companion workbook: initiative backlog · sizing model & assumptions · competitor benchmark (reco + coupon/pricing) · business-numbers audit
