Juspay Orchestrator has multiple

Benefits Over a Single Payments Facilitator

	JUSPAY Orchestrator	Single Payment Provider
PG Agnostic Card Tokenization	✓	✗ <i>Cards stored with Payment provider can only be used with that provider</i>
Single Integration for multiple Payment providers	✓	✗ <i>Need to connect with APIs of individual payment providers</i>
Dynamic & Intelligent routing to various providers	✓	✗
Unified dashboard view of payments across providers	✓	✗
Custom/ On-demand Integration	✓ <i>with unmatched SLAs</i>	✗ <i>Possible in certain scenarios but with high SLAs</i>
Published uptimes & Strict SLAs	✓	✗
Payment Consultancy to improve payment flows	✓	✗

The Best Payments Experience

Value Added Services

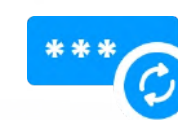

1-Click Card Checkout

Frictionless checkout for tokenised cards, with a CVV-less flow.

Advanced Offer Engine

Highly targeted Offers with the ultimate checkout experience for customers.

Auto Retry

Auto-retry with the best Success Rate Payment Method post first payment failure.

Outage API

Enhance Conversions by suggesting a different payment method in case of an outage.

Smart Convert

No-code dashboard for sales team to retarget active leads, convert them into paying customers.

Integrate With Multiple Payment Processors Easily With **Juspay Orchestrator**

No-code Integration with 300+ PGs

Connect with any payment processor/ acquirer/ wallet with a single integration

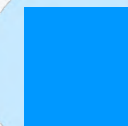

Give your customers a range of payment options providing a localized & personalized checkout experience

Network Tokenization

Offer your customers a more secure payment experience by replacing their card numbers with Tokens

Reduce risk check related declines to improve conversions and UX

Dynamic Routing Engine

Intelligently route your transactions real time to best performing payment gateway to increase transaction conversion

Configure your own rules to route transactions as per your business needs

Comply with Global Payment Standards

Fully compliant with PCI, SCA and more standards

Whitelabel Card Vault

Securely capture payment details of your customers for an efficient payment experience

Boost conversions by using saved cards across payment processors

Optimize Transaction Processing Costs

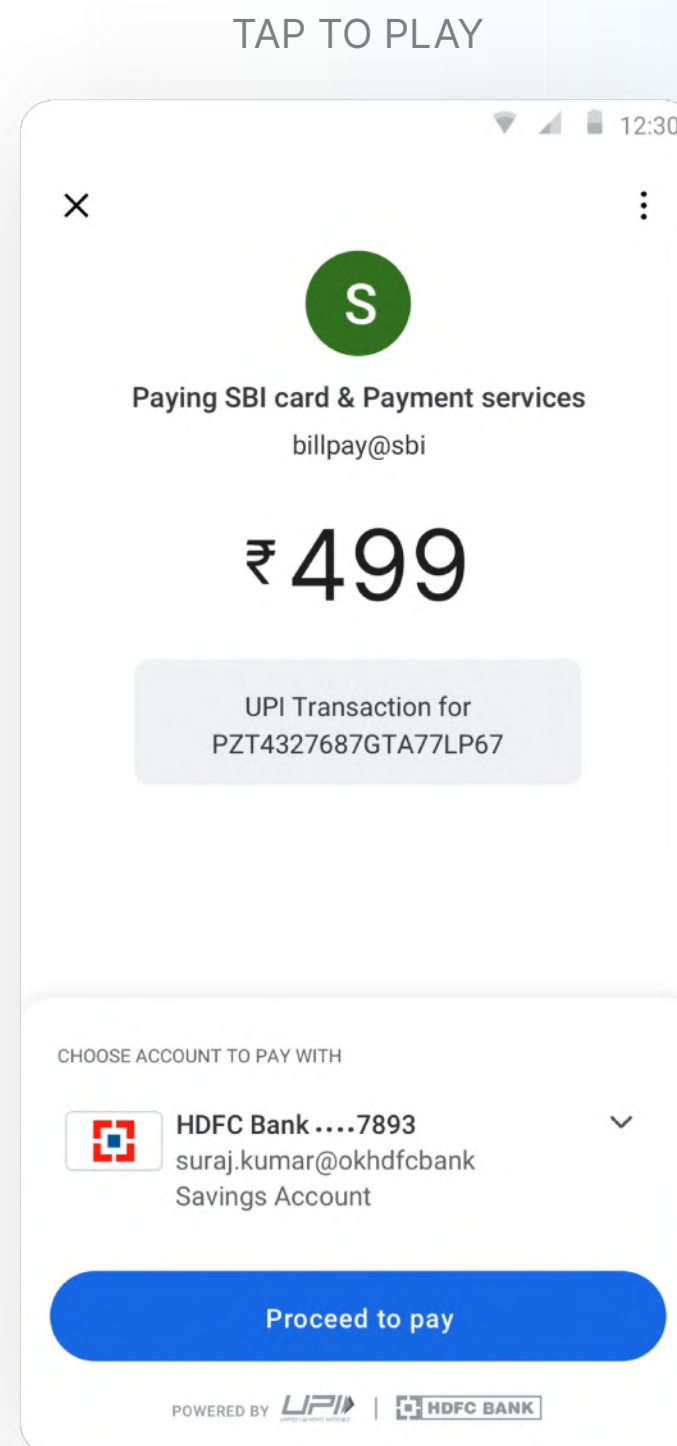

Define routing logic based on payment instrument, commercials etc to extract the best value from each transaction

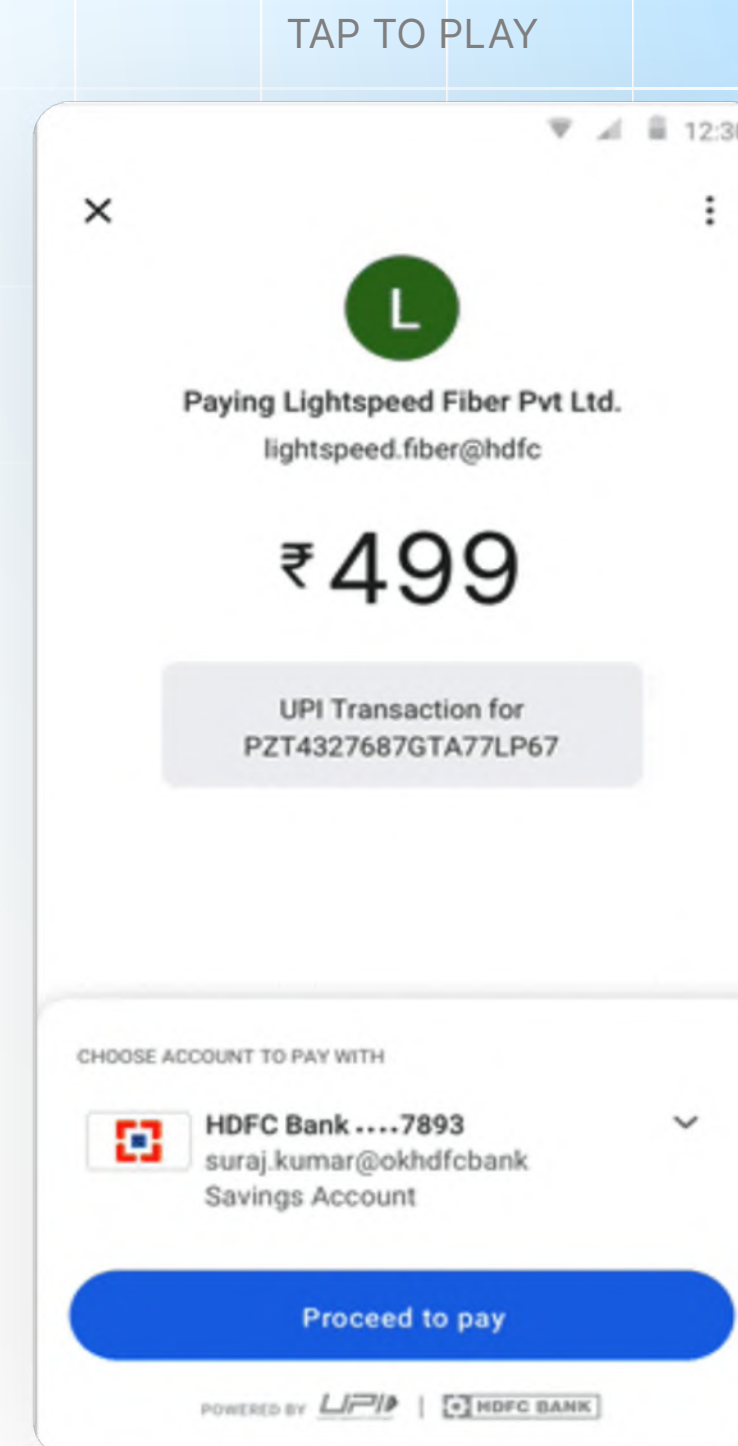

End-to-End Payment Experience With Payment Links

Payment Link can be used to provide end-to-end payment experience within the platform (WhatsApp/ SMS/ Gmail) without any additional browser redirections.

Highly preferred by Lenders as business is usually driven by offline channels. Agents can easily share these links with the customer to get the payment done.

UPI Deeplinks – Android

Payment page links

Offer Engine

A pre-built offers module that seamlessly scales with your evolving offers requirements.
