- › PayU Data Engines also power AI/ML models for personalized recommendations/nudges which improves conversions
- › 600M+ user insights

PayU X Truemeds Pay Engagement Opportunities

Card Payments

Best Card Payment Experience

Problem Statement

Truemed's high-AOV chronic-care customers drop off at card checkout due to multi-redirect 3DS flows, latency on legacy ACS, and friction on guest checkouts.

Solution

- › Direct integration with 10+ Acquirers and 6 Global switches for highest approval rates
- › **Support for Global & Local Cards** - All major Issuers supported
- › All Networks supported: Visa, Master, Amex, Diners, Rupay
- › Regulatory-backed authentication innovations with seamless flows and smart fallbacks like- **ExpressPay, Flashpay SDK, 3DS2.0 SDK**, etc.
- › **Card tokenization** with **One-click CVV-less** experience
- › Built-in **Alt ID solution** for secure encryption of card details for guest checkouts

ExpressPay – Zero Redirection Authentication

Problem Statement

Redirecting Truemeds customers to bank OTP pages adds page hops and breaks the checkout flow — every hop is an opportunity to lose a high-intent buyer.

Solution

- › **ExpressPay** : PayU's zero-redirection card payment solution for faster, smoother checkouts.
- › Collect OTP directly within your app or website for a seamless, non-disruptive customer experience—no redirection required.
- › Built on PayU's strong partnership with Wibmo's industry-leading ACS solutions.
- › Native Issuer ACS-led payment experience fully aligned with regulatory standards
- › Reduces checkout disruptions by minimizing page hops, improving conversion rates.
- › High bin coverage across Networks – Visa , Master, Diners, Rupay
- › Automatic fallback: Smoothly redirects customers to the bank's ACS page for OTP entry if needed

EMVCo Compliant

FlashPay – Biometric Authentication

Problem Statement

OTP friction is the #1 abandonment driver for card payments. Even saved-card returning customers drop off because of the OTP step on refill orders.

Solution

- › **FlashPay** - India's first Biometric Payments Solution which completes authentication in a flash!
- › Secure payments via Face-ID or Fingerprint - reduces fraud risk
- › Fast and reliable — processing time under 10 seconds, with no OTP hassle
- › Plug-and-play light weight SDK enables users to pay using biometrics securely within your App
- › Payment Aggregator interoperable solution, compliant with draft RBI guidelines on AFA
- › Supports both guest and saved card payments on Visa, Mastercard, Amex*, and RuPay*
- › 3DS2.0 SDK bundled as a seamless fallback – native OTP authentication

Tokenization

Problem Statement

Returning Truemeds customers face repeated card-entry - driving avoidable drop-offs on refill orders where intent is already high.

Solution

- › Tokenization solution to encrypt and save customer card Superior One-click CVV-less experience for saved cards
- › Future ready, supports multiple usecases - ITSP Token Enablement, **COFT**, Alt ID, Push provisioning , Device Tokenization
- › Both Issuer and Network token provisioning supported
- › **Push Provisioning** solution – tokens created at the issuer Bank portal can be securely transferred to multiple Merchants instead of individual creation
- › Eliminates the duplication of tokenization process at each app/website, making payments simpler and faster – easy retokenization of new cards post expiry

Convenience Fee

Problem Statement

Credit card MDR erodes margins on high-AOV orders. Truemeds needs a transparent, regulator-friendly way to recover convenience fees without hurting customer experience.

Solution

- › Accept Convenience Fees partially/fully from your customers
- › Both Full and Dynamic Convenience Fee supported –
 - › Full Convenience Fee - Here the complete fee is passed to the customer
 - › Dynamic(partial) convenience fee - Here partial fee is passed to customer. Remaining is borne by the Merchant themselves
- › Supported on both PayU checkout and Merchant checkout flows –
 - › PayU checkout flow- Convenience fee breakup would be shown on PayU's standard checkout page itself
 - › Merchant checkout flow – Convenience Fee breakup is shown on Merchant/interim page before the transaction is routed to PayU
- › Convenience Fee Calculation API helps merchants compute and display fees directly to customers.

All Modes

supported

The screenshot displays the PayU checkout interface. At the top, there's a header with the PayU logo and a 'Complete your payment' button. Below this, the 'Enter card details' section is visible, showing a summary of the transaction:

Item	Amount
Payable Now	₹ 19,318
Subtotal	₹ 20,000
No Cost EMI Discount	₹ -682
Convenience fee **	+ ₹18.5
GST*	+ ₹8
Total Cost (Payable to bank)	₹ 20,000

Below the table, the transaction ID is shown: Transaction ID:bjhkski767829. A note states: **Facilitation fee is charged by merchant for this transaction.

The bottom section, 'Complete your payment', shows the 'Confirm your payment' step. It displays the merchant name 'MS', the order ID 'hyper-ss-8120-sudheer2137', and the order value '₹100.0'. A breakdown of charges is shown: Surcharge ₹12.0 and Tax ₹0.24, leading to a total of ₹112.24. A note indicates that this amount will be charged to the card 'RUPAY - 607909'. A large blue 'CONFIRM & PAY' button is at the bottom. Logos for Visa, MasterCard, and JUSPAY are also visible.

UPI Payments

Best UPI Experience

Problem Statement

UPI is the dominant payment mode for Truemedics, but sub-par routing, slow intent responses, and patchy VPA validation cause silent drop-offs on first-time and repeat customers.

Solution

- › **1 in 2** UPI transactions in India powered by PayU (Mindgate)
- › Best SR with in-built Dynamic Routing across 6 Acquirers - HDFC, Indus, Axis, ICICI, Airtel, Yes
- › UPI Block and Capture (OTM) across all major UPI Apps & Issuing Banks
- › Support for UPI CC (15% cards are now issued by RuPay)
- › UPI flows supported – Collect, Intent, In-App
- › Static/Dynamic QR for convenience of scan&pay
- › Pre-Payment API support for 1st time user registration – Validate VPA and Number Mapper

In App UPI Payments

Problem Statement

Customers shuffling between Truemed's and their UPI app to complete payment is the single largest UPI drop-off source. Every app-switch is a lost order.

Solution

- › One-click, complete native (zero-redirect) UPI Payment experience with **UPI BOLT**
- › Customers enjoy end-to-end payment experience within your app - Account linking, viewing balance and enter UPI PIN to complete transaction
- › Pre-fetched user basis partner bank registration
- › Seamless registration journey for 1st time users
- › Reduced compliance overhead (compared to TPAP)

Subscription Payments

UPI Autopay – Recurring payments on UPI

Problem Statement

Truemeds runs a recurring medicine refill model but relies on one-time payments - creating refill drop-offs, broken treatment continuity, and lost repeat revenue every cycle.

Solution

- › Effortless recurring payments for your power users with PayU's **UPI AutoPay** solution
- › Seamless mandate setup using UPI PIN
- › Fully API-driven with customizable recurring amounts, frequency, and automated billing
- › Real-time visibility into mandate registration, status and debits
- › Supports both Collect and Intent flows on all major PSPs
- › Auto-debits without 2FA for mandates below ₹15K
- › Same-day multiple recurring debits supported

SI on Cards - Recurring payments on Cards

Problem Statement

Card-using customers - typically higher-AOV, premium chronic-care buyers - currently drop off at refill because saved-card OTP/CCVV friction kills auto-renewal intent.

Solution

- › Seamless recurring payments on cards with PayU's **SI on Cards** solution
- › Supported for both CC and DC on Networks -Visa, Mastercard, Amex (CC) & RuPay
- › Real Time status for Mandate registration and debit
- › SI on International - Collect recurring payments on from your international cardholders at a significantly lower cost
- › Supports periodic as well as on-demand debits
- › Offer your customers the flexibility to upgrade or downgrade their subscription plans anytime they want, with proration

Other Payments Solutions

Payment Links

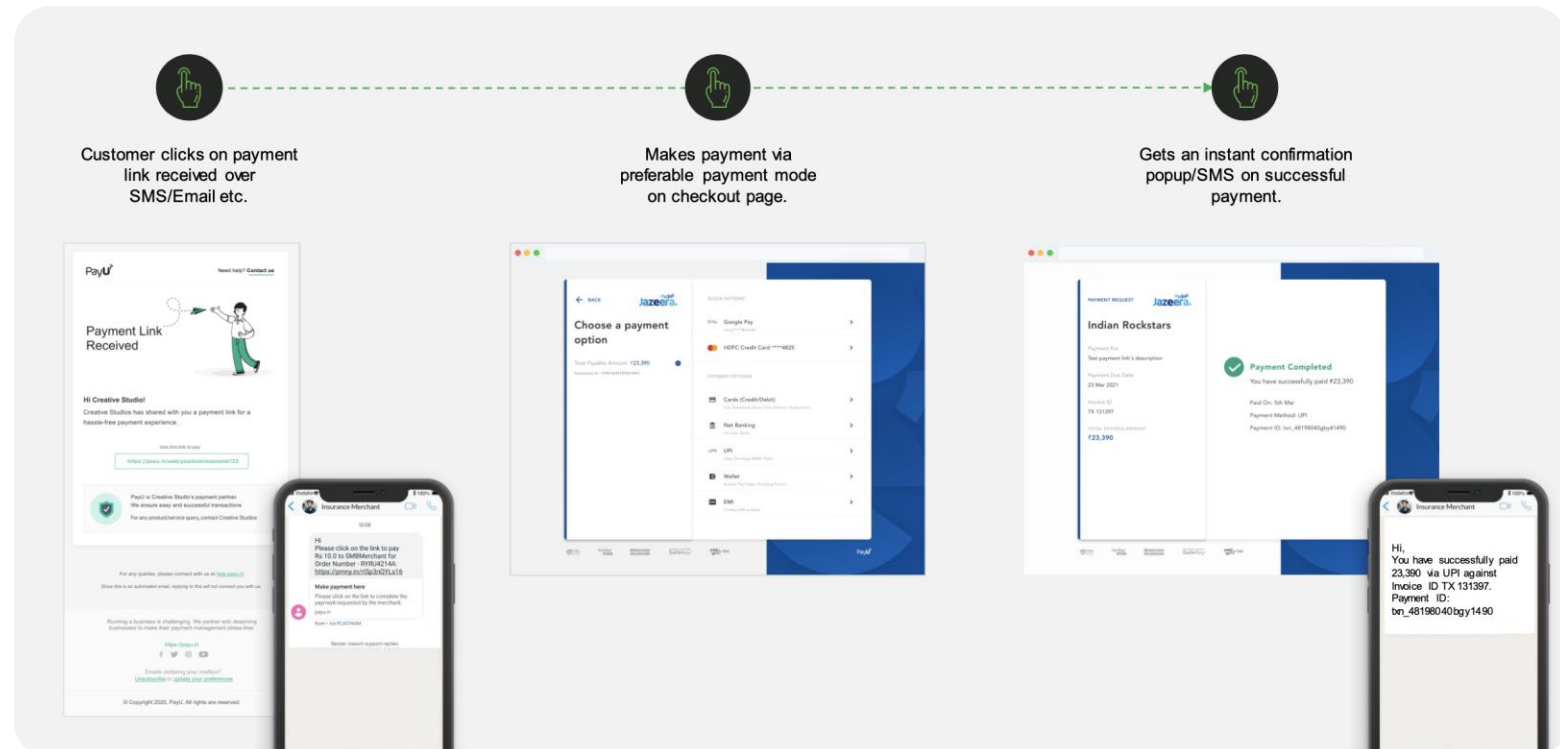

Problem Statement

Truemed's offline & support-led order flow (phone, manual prescriptions, customer queries) still relies on manual collection — slow, lossy, and impossible to track at scale.

Solution

- › Send easy payment reminders to customers along with payment links to accept payments instantly – full amount, in bulk or partial payments
- › Single/Bulk Link Creation through Dashboard/API
- › Real time payment tracking
- › Partial payment supported on payment links
- › Links easily sharable via SMS, Email, WhatsApp etc.
- › Payment supported - all payment modes

Whatsapp Commerce

Problem Statement

Truemeds' customers majorly elderly chronic-care buyers prefer WhatsApp over app navigation. Cart abandonment and refill nudges currently happen outside the conversion channel.

Solution

- › With **Whatsapp Commerce**, enable instant, user-friendly payments collection-directly on WhatsApp
- › Payments collection in 2 easy steps-
 - Automated reminders for payments
 - Real-time payment confirmation and tracking
- › Seamless Integration with Whatsapp Business Manager
- › All payment options supported

Affordability- BNPL

Problem Statement

Healthcare purchases are need-based, not discretionary. Customers delay or reduce medicine purchases due to upfront payment constraints. BNPL enables treatment continuity without financial friction.

Solution

What

Pay full amount in 15–30 days OR in 3 equal instalments (Pay-in-3). Zero interest within window.

No Card

Mobile-number based eligibility only. No forms or uploads needed.

1-Click

Pre-approved returning customers: payment done in under 5 seconds.

2Partners
