

21 standing defects.

20 closed. 1 still open.

Manual review of the MUM – DEV support channel, Apr 1–Jun 30. Every doctor/HA portal complaint in that window traces back to one of the 21 named defects below — each re-reported, re-diagnosed, and re-worked repeatedly before closure. One — the prescribe defect — is still open: mitigated from ~1,800 to ~200 impacted orders/day, but not yet root-caused end to end. Ranked by combined thread activity, a rough proxy for engineering hours sunk per bug.

PROBLEM STATEMENT

MUM – DEV is the shared channel where field support (HA/pharmacist/doctor-facing teams) escalates portal problems directly to engineering. Because there was no structured intake, the same underlying defects got re-reported dozens of times as fresh one-line pings rather than tracked to a single ticket — inflating both the visible noise in the channel and the real, repeated engineering time spent re-diagnosing problems that were already known. This log reconstructs the quarter to separate the two: how many **distinct** defects actually existed, versus how much repeat traffic each one generated before closure.

21

distinct standing defects identified

~255

individual incident pings across the quarter

~1,350

combined thread replies (engineering back-and-forth)

longest-running defect, open the entire window

1,800→200/day

orders still impacted by the one open defect (prescribe), down from peak

DEFECT	ACTIVE WINDOW	PINGS	REPLIES	STATUS
01 "Complete customer call to confirm" won't clear Order stays unconfirmable after full talk time — the single loudest bug of the quarter, re-reported almost daily. CONFIRM/BACKEND	Apr 12 → Jul 10 + 	40	350 replies	● Resolved
02 Order stuck / "Bill Details not found" (500) Order freezes on doctor profile; backend 500 with the same error signature, near-daily curl-dump reports. CONFIRM/BACKEND	Apr 13 → Jun 30 	30	240 replies	● Resolved
03 "All Original" medicine selection broken HA can't select the original medicine, forced onto substitute. RCA: wrong reason-code (9 vs 323) in FSP table. MEDICINE	May 12 → Jun 30 	10	150 replies	● Resolved
04 Substitute selection broken ("setSubstituteForaProduct") Clicking substitute throws a popup error. RCA: missing substitute_medicine table entry for affected FSPs. MEDICINE	May 12 → Jun 30 	7	140 replies	● Resolved
05 Ozonetel / telephony connectivity Calls disconnect on Leg 1, ring late, or drop voice mid-call. Three vendors touched (Ozonetel, Knowlarity, Exotel stopgap). TELEPHONY	Apr 3 → Jul 11 	20	120 replies	● Resolved

DEFECT	ACTIVE WINDOW	PINGS	REPLIES	STATUS
06 Portal buffering / infinite load Doctor or pharmacist portal spins indefinitely; recurs across releases with no single root cause pinned. INFRA	Mar 27 → Jul 10 	15	120 replies	● Resolved
07 OTP / login failure Agents can't receive OTP or get blank screen post-login. One incident (29 Apr) alone drew 42 replies. ACCESS	Apr 29 → Jul 8 	4	70 replies	● Resolved
08 "You already have a call in progress" HA gets a new order mid-call and is blocked from taking it. One master thread ran the entire quarter. TELEPHONY	Apr 12 → Jun 29 	2	55 replies	● Resolved
09 HA/doctor unable to prescribe (dosage blank / not fetched) Prescribe shows "successfully stored" but medicine never fetches, or dosage renders blank. Eng-confirmed 16 Jun: portal-side fix shipped 6 Jun reduced volume, but the customer-placed-order variant is still unresolved. Daily impacted order volume has fallen from ~1,800/day at peak to ~200/day currently — mitigated, not closed. MEDICINE	May 9 → Jul 10 + 	5	52 replies	● Open
10 Auto-assignment to doctor/HA failing post 1st attempt Orders don't re-assign automatically after a failed first attempt; formalized as an open question 8 May. ROUTING	Apr 23 → May 8 	4	47 replies	● Resolved

DEFECT		ACTIVE WINDOW	PINGS	REPLIES	STATUS
11	Null / no-category order Orders land with no category, blocking routing; required a manual "runner" trigger every 30–40 min as a workaround. ROUTING	Apr 7 → May 12 	6	30 replies	● Resolved
12	Cross-system sync: NetSuite ↔ Admin ↔ Pharmacist Same order/PO/invoice opens in one system but not another — recurring monthly, same reporter. SYNC	Apr 1 → Jul 11 	10	30 replies	● Resolved
13	Valid / Pilot category misrouting Orders or HAs cross category boundaries incorrectly — Valid getting Pilot orders and vice versa. ROUTING	May 29 → Jul 11 	2	20 replies	● Resolved
14	"Error while marking health advisor available" Same error text, different HA each time — a self-serve fix candidate, not a debugging task. ACCESS	Apr 27 → Jul 9 	9	18 replies	● Resolved
15	Metabase lag Dashboard numbers freeze mid-shift; verbatim-identical complaint text reused across incidents. INFRA	Mar 31 → May 13 	8	16 replies	● Resolved
16	Hold / reassignment duplicate-call bug Order reassigned to a new doctor before the first finishes — customer gets a second consultation call. CONFIRM/BACKEND	May 26 → Jul 9 	3	14 replies	● Resolved

DEFECT	ACTIVE WINDOW	PINGS	REPLIES	STATUS
17 Doctor order-count / earnings not updating Confirmed orders don't increment the doctor's count or earnings on the portal — distinct from the metabase lag. INFRA	Mar 27 → Jul 3 	7	10 replies	● Resolved
18 Duplicate entries in FSP cab Medicines double up with sub auto-selected — flagged as an escalation risk (wrong substitution could ship). MEDICINE	Jun 18 → Jun 20 	2	4 replies	● Resolved
19 Order cancellation blocked "Order not eligible for cancellation" fired on 10 orders in a single batch. CONFIRM/BACKEND	Jun 30 → Jun 30 	1	4 replies	● Resolved
20 Prescription generated under wrong doctor's name Control/DCC category orders show a different doctor's name on the Rx than who actually consulted. MEDICINE	Jun 16 → Jul 9 	2	2 replies	● Resolved
21 "Already processed by another doctor" Confirm-block error on 4 order ids in a single report. CONFIRM/BACKEND	May 21 → May 21 	1	3 replies	● Resolved

Method: reconstructed by scrolling the full MUM – DEV Google Chat history (Apr 1–Jun 30) and hand-tagging every top-level incident report. **Pings** = number of separate messages reporting that defect; **Replies** = combined reply count across those threads, used as a rough stand-in for

engineering time spent. Both are estimates from manual reading, not exact chat-analytics counts. Rows 3–4 and the "duplicate FSP entry" row were confirmed as still-open root causes in a pinned engineering status note dated 16 Jun . 20 of 21 are resolved; the prescribe defect remains open, mitigated from ~1,800 to ~200 impacted orders/day but not yet fully root-caused.
